

TOPSIGNS

Upgrade your shop fittings with new, beautiful top signs

Effect-Line shop fittings can now be supplied with new, beautiful top signs with a nice print customized for your needs. If you already have our shop fittings, you can easily add these signs, so your aquarium, rodent, bird or terrarium racks will appear with a new attractive look.

The height of the signs are 35cm, and are easily mounted to all effect_line racks - new or old.

The prints are made according to your personal wishes, also with your own logo if wanted.

Create a new and exciting effect in your aquarium department with our new beautiful port holes. Easily mounted on all end panels.

Effect-line

Effect-Line Marine racks are developed in order to create a unique, functional and price attractive plug and play solution for the modern pet shop. The secret behind the concept is the innovative solution with technical compartments between every other unit. In the compartments you will find the skimmers and UV's which are easily accessible in order to be cleaned and serviced. Every unit has its own 150 ltr sump with 3500 l/h return pump, overflow to sewer, automatic top-up (fresh water) and mechanical pre-filter. The sump is serviced via the large sliding doors at the bottom

of the units. When all service can be done from the front side of the rack, the Effect-Line Marine Racks can be placed close up against the shop walls.

The aquariums are equipped with an attractive durable blue fibre glass panel. Behind this panel you will find the overflow pipe to the sump and a 3000 l/h Eheim circulation pump, that provides a good and sufficient water circulation in every single aquarium. With the use of dividers, every single aquarium can be dealt up into more compartments according to your needs.

The racks are delivered complete with 2x54W T5 lights over each aquarium, Eheim pumps (3 pcs. 3000l/h and 1 3500 l/h), TMC JetSkim1500 skimmer and 36W TetraTec UV sterilizer. If you have your own equipment or just prefer other brands, we can supply the racks without accessories (pumps, skimmers and UV's)

The aquariums are delivered 50 cm deep and in two lengths; 100 cm and 125 cm. The technical compartment has a standard width of 40 cm.
